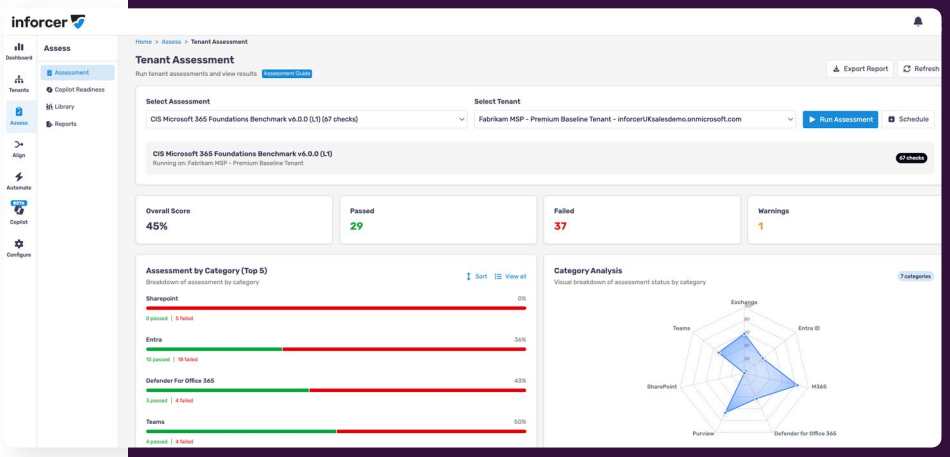
ConRes IT SOLUTIONS | Microsoft

M365 Security Health Check Assessment

Know where your business stands against security threats with a M365 Security Health Check Assessment. Malicious actors frequently target M365, taking advantage of vulnerabilities to infiltrate tenants by focusing on:

- Insecure or outdated authentication methods
- Security controls that are not configured properly
- Accounts with high levels of privilege
- Accounts with simple passwords or those that lack multifactor authentication



inforcer gives MSPs a repeatable way to benchmark Microsoft 365 tenants, show clients exactly where they stand, and back up every security recommendation with evidence.

What is a M365 Security Health Check Assessment?

A zero-cost service that evaluates your M365 security posture and identifies potential risks and vulnerabilities, followed by a consultation with a Microsoft-certified engineer who will walk you through the findings and answer your questions. Our goal is to help you maximize the benefits of Microsoft 365's security capabilities while mitigating potential risks.

Intune | Defender | Entra ID | Purview | Teams | Exchange Online | Sharepoint and OneDrive

How ConRes assesses your environment, powered by inforcer

ConRes employs inforcer to standardize security and manage your Microsoft 365 environment from a single dashboard. Cover the full Microsoft 365 stack with inforcer — Intune, Defender, Entra ID, Purview, Teams, Exchange Online and SharePoint — surfacing misconfigurations, policy gaps and configuration drift automatically. The result is a more consistent, thorough assessment with findings you can act on right away.

WHAT INFORCER DOES

- Deploys and standardizes Microsoft security policies including conditional access, MFA and security baselines across your environment
- Monitors compliance and detects configuration drift automatically, flagging issues before they become vulnerabilities
- Eliminates manual service-by-service security audits so findings are faster and more reliable
- Prepares your environment for Microsoft Copilot and AI adoption by identifying security and governance gaps in advance

WHAT YOU RECEIVE

- A clear view of your security posture measured against recognized frameworks like CIS and NIST
- Identified misconfigurations and policy gaps across Intune, Defender, Entra ID and Purview with context for each finding
- Targeted remediation steps prioritized by risk, so your team knows exactly where to focus first
- A repeatable baseline that makes every future assessment a measurable improvement on the last

From assessment to action

Inforcer gives our team framework-mapped depth across your environment. Every engagement follows the same three-step path.

1 **Collect & Analyze**
Gather information on current environment and security practices

2 **Plan**
Identify business goals and objectives

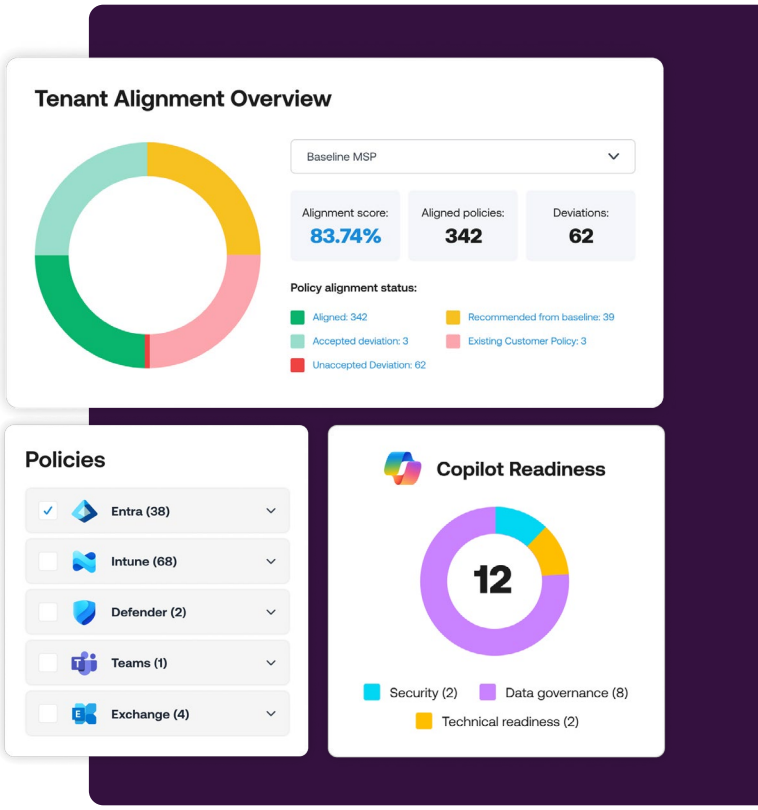
3 **Action**
Build the plan to implement policies and controls to reduce risk with M365

ConRes gives you the priorities, the context and the team to act on what it finds. Continue to see what your assessment includes.

**Available at no additional cost to eligible customers who meet Microsoft program requirements*

What you receive and who delivers it

- **Executive summary report** — Findings in plain language, ranked by risk and written to be shared with leadership, auditors and insurers.
- **Tenant configuration snapshot** — A documented record of your current M365 security configuration across all connected services.
- **Framework alignment scorecard** — Your environment scored against CIS, NIST and other recognized standards.
- **Expert consultation** — A working session with a Microsoft-certified engineer to walk through every finding and answer your questions.



Ideal for Organizations:

- Running M365/O365 E3, E5, or M365 Business licenses
- Preparing for an audit or responding to a compliance requirement — CMMC or cyber insurance attestation
- Planning a Microsoft Copilot or AI rollout and needing governance in place first
- Supporting a growing environment with a lean IT team and no dedicated security staff
- Carrying configuration inherited from a migration, acquisition, or prior provider
- Uncertain whether you are using the security capabilities you already pay for

Schedule your M365 Security Health Check Assessment

Most assessments end with a report. ConRes is a full-service Microsoft partner, which means the team that identifies your gaps can also close them — licensing, deployment, remediation, and ongoing managed services under one relationship. **To get started and confirm your eligibility, email microsoftsolutions@conres.com.**
